OBJECTIVES

After this course, participants should be able to:

- Explain the field of Neuro Ophthalmology in general ophthalmic terms
- State unusual cases that makes physicians re-think their approach to certain eye diseases
- Describe what we have had in Neuro Ophthalmology, what we are doing now, and the future of Neuro Ophthalmology
- Explain how eye disease has risen in West Virginia and what physicians are doing to help patients in rural areas
- Describe cases in which the etiology does not always lead to the correct diagnosis
- Explain how to use a website as a tool for patient education
- Describe rehabilitation of physicians with addiction and the monitoring and support for physicians who return to clinical practice
- Compare the indications and patient selection for currently available glaucoma surgical interventions
- Analyze the new treatments and diagnostic procedures in orbital and ocular adnexal oncology
- Complete a checklist of steps for a procedure to make sure the proper sequence of events are followed for a positive outcome
- Describe the new refractive surgery updates
- Define the new laser floater removal techniques
- Determine the best way to diagnose ocular surface diseases
- Compare the different methods of cataract surgery to have positive outcomes
- Describe where cataract, presbyopia, and refractive surgery is heading in the future
- Determine the best way to code for billing a diagnostic test
- Explain the updates to new coding and billing methods in 2018
- Explain the new ways of treatment for thyroid eye diseases
